## UI DEVELOPER

304 W Roosevelt St  
Unit 102  
Phoenix, AZ 85003  
602-502-5743  
drkgry@gmail.com

## Education

BA Visual Communications  
Collins College, 2003

## Summary

I pride myself in attention to detail, from the screen rendering to the code itself, everything must be clean and organized. My focus is making beautiful, usable and fun web apps. I enjoy developing micro-interactions and adding UI animations to the projects I work on. One of my strengths is the variety of work I have done and the ability to jump into different environments.

I have studied computer science but have a degree in design. I love the web because it's a place where art and programming meet. My passion is finding ways to make the web a better place through code and an eye for detail. There is always something new to learn and being a web developer is always exciting.

A large focus of mine is responsive design and user experience. I am obsessive about precision and proper execution but I enjoy breaking the boundaries of expectation and trying new things.

## Skills

### HTML and CSS

Using a variety of templating languages, pre- and post-processors, build tools and ingenuity I can crank out a top notch UI for any kind of web app.

### JavaScript

JS has come a long way since my early days hacking together plugins for MooTools and Prototype. I have used jQuery daily for over a decade but the last few years have been building everything in Angular and React.

### Git

Another everyday tool and essential for keeping sanity when collaborating on code. I have used other version control software but this by far the most common and I have years of merging and forking under my belt.

### Node

I have written a small amount of server and API code in Node but most of the time I'm using Node for package management and a build tool for task running.

### PHP and MySQL

I have built a lot of WordPress sites, always a lot of WordPress.

## Experience

### Tallwave

Senior Software Developer, 01/17-04/17

I am proud to have been promoted in recognition of my leadership and contributions at Tallwave. I was leading two important projects for the company and happy to see them through successfully before my departure.

Front-End Developer, 05/14-12/16

I joined Tallwave as part of 29th Drive after they were acquired and integrated to infuse design thinking and build out a services group. It was an amazing experience working on a variety of different software products in diverse technologies. I began as the only full-time developer, building web user interfaces and WordPress site. I ended as a part of a talented team of seven developers building full stack web applications.

Responsibilities:

- Building custom user interfaces for web apps
- Ground up build and architecture of custom websites
- Device/browser testing and bug fixing
- Version control and code maintenance
- Contractor management and code review
- Design-in-browser and responsive design
- UI interactions and animations
- Creation of documentation and guidelines

### Revolution Parts

Front-End Developer, 03/14-04/14

Revolution Parts is an up and coming SaaS that provides an intelligent ecommerce platform for selling car parts. They have a team of bright engineers but needed some help with polish and UX. I was able to work on a few small projects with them before being offered a full time job at Tallwave.

Responsibilities:

- UX, visual design and coding of shopping cart checkout page
- Visual design and coding of email templates for order and shipping confirmation

### 29th Drive

Front-end Developer, 10/13-01/14

29th Drive is a high end creative agency that does user experience and visual design for websites and apps. It was great fun and a learning experience working with their team. They use bleeding edge technology to produce amazing products.

Responsibilities:

- Creating hand crafted HTML/CSS/JS code from PSDs
- Creating interactive and animated UI interactions
- Debugging existing code
- Creating documentation and guidelines for template usage

### Pearson Education

Web Designer, 07/09-05/13

Pearson is a large education company and my full time employer for close to four years. I was hired and worked primarily as a web designer but also used in numerous capacities during my tenure. My group functioned as an in house creative agency developing online marketing campaign materials. I had a great experience there and learned a lot about working with not only many people, but many different groups in the company all over the globe.

Responsibilities:

- Coding marketing campaign microsites for multiple domains under the Pearson umbrella
- Creating HTML/CSS best practice guidelines for other marketing departments
- Developing and coding multi-channel campaign programs for email, social media, and display marketing
- Training other marketing groups on campaign setup and deployment
- CRM database maintenance and analysis
